

Asanti is a colocation data centre provider, created by a team with a proven track record of experience designing, deploying and managing data centres.

We currently operate 6 UK data centres, the locations of which have been strategically chosen based on excellent network coverage and power availability. Their paired locations also make them excellent business-live and disaster recovery options for critical IT infrastructure. Each location is backed by uptime SLA's and powered by 100% certified green energy.

Our commitment to innovation means that our secure data centres are optimised for performance, making them ready to host solutions for a range of sectors. Whether those business needs are for traditional IT infrastructure or hybrid cloud solutions.

Flexibility is a key part of what we do, that's why we offer fixed fee as well as PAYG commercial models for power, enabling businesses to explore opportunities to reduce OPEX and deliver more predictable costs.

We are Asanti, and we are purpose built to deliver leading edge data centre solutions to the businesses of today, and tomorrow.

- 
- Bank House, Faulkner Street, Manchester, M1 4EH
 - Manchester city centre location
 - Only commercial data centre within the M1 area
